## Lesson 18. Tangent Planes and Normal Lines

## 0 Warm up

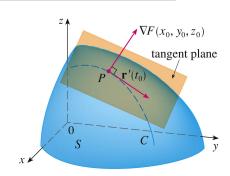

**Example 1.** Let *P* be the point (2,0,1) and  $\vec{v} = \langle 1,-2,5 \rangle$ .

- a. Find parametric equations of the line that passes through *P* and is parallel to  $\vec{v}$ .
- b. Find an equation of the plane through point *P* with normal vector  $\vec{v}$ .

## 1 Tangent planes and normal lines in 3D

- Consider a surface with equation F(x, y, z) = k
- The gradient  $\nabla F(x_0, y_0, z_0)$  is

to the surface at  $(x_0, y_0, z_0)$ 

- The **tangent plane to the surface** F(x, y, z) = k at  $(x_0, y_0, z_0)$  is the plane that
  - passes through  $(x_0, y_0, z_0)$  and
  - ∘ has normal vector  $\nabla F(x_0, y_0, z_0)$
- Equation of tangent plane to F(x, y, z) = k at  $(x_0, y_0, z_0)$ :

ampic 2.	Find an equation of th	ne tangent plane	to the ellipso	$\frac{10}{9} + y^2 + \frac{1}{9}$	$\frac{1}{4}$ = 3 at the	point $(-3, 1, -2)$
ample 3.	Find an equation of th	ne tangent plane	to the surface	$e z = 2x^2 + y^2$	at the point	(1,1,3).
<ul><li>pas</li><li>is p</li></ul>	hal line to the surface ses through $(x_0, y_0, z_0)$ erpendicular to the ta ic equations of the no	ngent plane (i.e.	, is parallel to	$\nabla F(x_0, y_0, z_0)$		
	1	(1)		(10)		
ample 4.	Find the normal line	to the ellipsoid	$\frac{x^2}{9} + y^2 + \frac{z^2}{4} =$	= 3 at the poir	at $(-3,1,-2)$ .	

## 2 Tangent lines in 2D

• The **tangent line to the curve** f(x, y) = k at  $(x_0, y_0)$  is given by

 $\nabla f(x_0, y_0)$   $P(x_0, y_0)$  evel curve f(x, y) = k

**Example 5.** Let  $g(x, y) = x^2 + y^2 - 4x$ . Find the tangent line to the curve g(x, y) = 1 at the point (1, 2).
